MILLIMETER

-redefining natural stone-

Casanova

MILLIMETER is a revolutionary approach to natural stone.

We transform marble, quartzite, travertine and other natural materials into ultra-thin surfaces ranging from 1 and 5 millimeters.

This innovation allows architects and designers to achieve what was once impossible:

curved stone, lightweight structures, and seamless integration in high-end spaces.

MILLIMETER es una nueva forma de entender la piedra natural.

Transformamos mármol, quartzite, travertine y otros materiales en superficies ultrafinas de entre 1 y 5 milímetros.

Esta innovación permite lograr lo que antes era imposible:

curvas reales en piedra, estructuras ligeras e integración perfecta en espacios de alto nivel.

Problems & Solutions

TRADITIONAL STONE — THE PROBLEM

Traditional stone 2cm and 3cm comes with limitations:

Excessive weight
Demasiado pesada para estructuras modernas

Complex installation
Instalación lenta y costosa

Design restrictions
Imposible curvar o doblar

High risk during execution
Alto riesgo de roturas en obra

MILLIMETER — THE SOLUTION

A proprietary system that redefines the behavior of natural stone.

Thickness reduced to 1–5 mm
Espesor reducido a 1–5 mm

Up to 80–90% weight reduction
Hasta 80–90% menos de peso

Curves and complex geometries
Curvas y geometrías complejas posibles

Enhanced installation efficiency
Instalación más rápida y segura

What can MILLIMETER do?

Feature walls	Fireplaces	Architectural elements	Walking showers
Custom furniture	Doors & panels	Curved surfaces	Ceilings

Bed wall · Cream Travertine 1mm · Marble arch · Calacatta Viola 1mm–2cm · Custom kitchen island · Quartzite & Travertine · Floating shelves · Stone · Feature wall panel

MILLIMETER expands the possibilities of natural stone with new explosive designs.

Muros decorativos · Chimeneas · Elementos arquitectónicos · Grandes duchas · Mobiliario personalizado · Puertas

Feature walls · Fireplaces · Architectural elements · Walking showers · Custom furniture · Doors & panels

A healthier future for stone.

As the world moves away from high-silica engineered surfaces, MILLIMETER offers a natural, lightweight and future-ready alternative.

ENGINEERED QUARTZ — HIGH SILICA

40% – 80%

silica content

Serious health risks to fabricators and installers

MILLIMETER — NATURAL STONE

< 0.5%

silica content

Safer for designers, fabricators and installers

MILLIMETER BENEFITS | BENEFICIOS

100% natural stone

Piedra 100% natural

Easier and safer handling

Manipulación más sencilla y segura

Lower silica exposure

Menor exposición a la sílice

A healthier future for the industry

Un futuro más saludable para la industria

Reduced artificial resins

Menos resinas y compuestos químicos

Health & Safety

Safer Stone Processing

High-silica engineered stone contains up to 80–90% silica, posing serious health risks to workers.

MILLIMETER solutions contain less than 0.5% silica, promoting a safer work environment.

< 0.5% silica · 100% natural stone · Safer for all
